

Java 2 Platform, Enterprise Edition (J2EE) Platform Overview for Managers (WJTB-310)

The J2EE Platform Overview for Managers bundle provides students with the key concepts and technical insights necessary to manage or proscribe distributed application development with the Java 2 Platform, Enterprise Edition.

Who Can Benefit

Students who can benefit from this course are program managers, business analysts, and project managers who require a rapid introduction to object-oriented software development, the Java programming language, and how the J2EE technology set addresses distributed applications.

Skills Gained

Upon completion of this bundle of courses, students should be able to:

- List and describe several best practices of Object-Oriented Software Development
- Describe the key features of the Java programming language
- Understand why distributed computing is important and how the Java platform supports distributed systems
- Compare the benefits of the J2EE and .NET platforms
- List and describe the four main tiers of a J2EE architecture
- Describe how web services are used in a distributed architecture

Course Content

COURSES INCLUDED IN BUNDLE:

(in order to offer the latest technology information, this course list is subject to change at any time)

- WJT-3101: Modern Software Development Practices
- WJT-3102: Distributed Computing with Java Technology
- WJT-3103: J2EE Software in a Distributed System
