

Oracle Database 10g: SQL Tuning Workshop

What you will learn:

This course is designed to give the experienced SQL Developer or DBA a firm foundation in SQL tuning techniques. The participant learns the necessary knowledge and skills to effectively tune SQL in the Oracle Database 10g. They learn about tuning methodology as well proactive tuning and reactive tuning methods. Students are introduced to the benefits of the new automatic tuning mechanisms available in Oracle Database 10g. On completion of the course they are able to compare and contrast the steps involved to tune manually as in prior releases as well as use the automatic SQL tuning features provided in the current release. Students gain a thorough conceptual understanding of the Oracle Optimizer, and reinforce instructor-led learning with structured hands-on practices. The course uses a series of challenge-level workshops, allowing students to "play, discover, and learn" at their own level and pace. The students learn to use the Oracle diagnostic tools and facilities: Automatic SQL Tuning components, EXPLAIN, SQL Trace and TKPROF, SQL*Plus AUTOTRACE. Students also learn to influence the behavior of the Optimizer by changing the physical schema and modifying SQL statement syntax.

This course counts towards the [Hands-on course requirement](#) for the Oracle Database 10g Administrator certification.

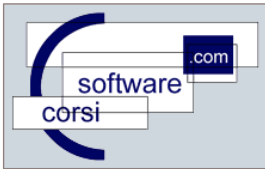

Audience:

Forms Developer
PL/SQL Developer
Technical Consultant
Reports Developer
Business Intelligence Developer
Java Developer

Prerequisites:

Required Prerequisites:

Suggested Prerequisites:

[Oracle Database 10g: PL/SQL Fundamentals](#)

Course Objectives:

- Describe the basic steps in processing SQL statements
- Describe the causes of performance problems
- Understand where SQL tuning fits in an overall tuning methodology
- Describe Automatic SQL Tuning
- Use the diagnostic tools to gather information about SQL statement processing
- Understand Optimizer behavior
- Influence the optimizer behavior
- Influence the physical data model so as to avoid performance problems

Course Topics:

Database Architecture overview

- Overview of Database architecture
- Listing the SQL Statement Processing Steps
- Identifying Means to Minimize Parsing
- Stating the Use of Bind Variables

Following a Tuning Methodology

- Describing the Causes of Performance Problems
- Identifying Performance Problems
- Using a Tuning Methodology

Designing Applications for performance

- Oracle Methodology
- Understanding Scalability
- System Architecture
- Application Design Principles
- Deploying New Applications

Introducing the optimizer

- Describe the functions of the Oracle optimizer
- Identify the factors that the optimizer considers when it selects an execution plan
- Set the optimizer approach at the instance and session level
- Use dynamic sampling

Optimizer Operations

- Execution plans
- Types of Joins

Displaying Execution plans

- Using the EXPLAIN PLAN Command
- Interpreting EXPLAIN Output
- Interpreting AUTOTRACE Statistics

Gathering Statistics

Using the DBMS_STATS Package
Identifying Table, Column, and Index Statistics
Building Histograms

Application Tracing

Statspack
End to End tracing
Invoking the SQL Trace Facility
Setting Up Appropriate Initialization Parameters
Formatting Trace Files with TKPROF
Interpreting the Output of the TKPROF Command

Identifying High Load SQL

Use different methods to identify high-load SQL
ADDM
Top SQL
Dynamic Performance views
Statspack

Automatic SQL Tuning

Query Optimizer Modes
Types of Tuning Analysis
SQL Tuning Advisor
SQL Tuning Sets
Top SQL

Introduction to Indexes

Identifying Row Access Methods
Creating B-Tree Indexes
Understanding B-Tree Index Access and Index Merging

Advanced Indexes

Using Bitmapmed Indexes
Using Function-Based Key Indexes

Optimizer Hints and Plan Stability

Using Hints
Purpose and Benefits of Optimizer Plan Stability

Materialized Views and Temporary Tables

Using the CREATE MATERIALIZED VIEW Syntax
Utilizing Query Rewrites
